Advanced UST Inspector Training for Automatic Tank Gauge Systems

Summary: This two-day course is for any UST compliance inspector who needs a comprehensive understanding of the inner workings of ATG systems, including in-tank monitoring, sensors and line leak detectors. Morning classroom lessons are followed by live field-trip exercises at nearby UST facilities in the afternoon.

Students will learn to perform thorough compliance inspections and be able to troubleshoot a variety of problem situations. The course includes a training binder with an extensive reference CD library for students to use after the class.

Topics include components, operations, functions, programming, diagnostics, certificate and documentation.

Speakers: Ben Thomas of Ben Thomas Associates, Inc. and Richard S. Bradley of CQE Systems.

Audience: This course is intended for UST inspectors with basic understanding of UST rules although no experience is required. Federal, State, Tribal and Municipal government inspectors as well as UST owners and operators can all benefit from this exciting new class.

Location: Nearly anywhere. This course is portable and can be provided in most major US cities, pending sufficient enrollment. Seating is limited to 30 students per class.
